

ZitaTech's Accelerated Deployment Solutions (ADS) for SAP Master Data Governance (MDG)

Experience unprecedented operational efficiency with ZitaTech's Accelerated Deployment Solution (ADS) – a groundbreaking platform engineered to expedite the implementation of SAP Master Data Governance (MDG) across a wide array of industries. ADS delivers a new level of effectiveness, streamlining data governance across an assortment of business scenarios.

Our revolutionary solution comes packed with customizable features designed to cater to the distinct needs of diverse organizations. ADS empowers businesses to redefine and enhance their data governance strategies, achieving optimal performance and profitability.

Leverage the power of ADS for a quicker, cost-effective MDG implementation. It's time to set new standards in operational efficiency and cost savings. Welcome to a future powered by ZitaTech's ADS.

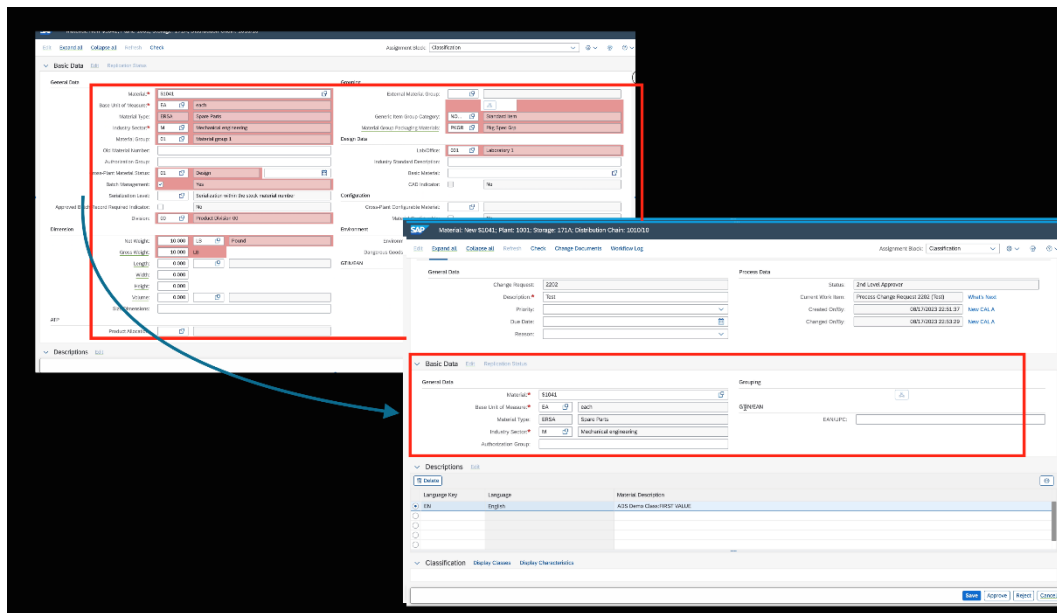

Features

Adaptive User Interface Simplification

Imagine a solution that not only caters to your organization's unique needs but also actively adapts to them. That's exactly what ADS delivers. Our software is built to offer dynamic UI simplification of the SAP MDG Change Request User Interface based on any field or other dynamic criteria. This creates a user journey that seamlessly reflects your organization's ethos and operational intricacies.

But ADS's capability isn't limited to customization. It also streamlines SAP MDG implementation, significantly reducing transition time and ensuring smooth, seamless integration within the S/4HANA landscape.

In essence, by opting for ADS, you're not just choosing an advanced tool - you're investing in a responsive solution that dynamically molds itself to the unique DNA of your organization, enhancing efficiency and user experience alike.

Dynamic Workflow Design and Approver Determination

ADS stands as a robust platform for creating and managing both sequential and parallel workflows tailored to your organization's specific needs. Our unique framework enables you to set up workflows based on freely defined criteria, enhancing data governance efficiency and adaptability. Furthermore, ADS facilitates the Agent Determination of workflow steps by leveraging security roles or HR organizational structures. This ensures tasks are strategically directed to the correct teams or individuals when needed, reinforcing data governance efficiency and reliability.

Leverage the power of ADS to create, manage, and optimize your data governance workflows. The platform gives you a firm grip on your workflow process, effectively aligning your workforce and procedures. Experience unprecedented operational efficiency and data integrity through ADS's tailored and precise workflow management solutions.

The screenshot displays the SAP ADS interface for a Change Request. The main window is titled "Material: New ADS: Parallel Workflow" and shows the "Change Request" details for request 1206. The "Work Items" pop-up window is open, showing a list of work items for this request.

Description	ID
<input checked="" type="radio"/> Process Change Request 1206 (ADS: Parallel Workflow)	000000216251
<input type="radio"/> Process Change Request 1206 (ADS: Parallel Workflow)	000000216258

The main interface shows the following details for Change Request 1206:

- General Data:** Change Request: 1206, Description: ADS: Parallel Workflow, Priority: (blank), Due Date: (blank), Reason: (blank)
- Process Data:** Status: Manufacturing (Parallel Approver), Current Work Item: (blank), Created On/By: 08/21/2023 02:10:53 A, Changed On/By: 08/21/2023 02:12:24 A
- Basic Data:** Material: 4275, Base Unit of Measure: EA each, Material Type: PRL Parallel Workflow, Industry Sector: M Mechanical engineering, Material Group: (blank), Old Material Number: (blank), Authorization Group: (blank), Cross-Plant Material Status: 01 Design, Batch Management: No, Serialization Level: Serialization within the stock material number, Approved Batch Record Required Indicator: No, Division: 00 Product Division 00
- Design Data:** Lab/Office: 002 Laboratory 2, Industry Standard Description: (blank), Basic Material: No, CAD Indicator: No
- Configuration:** Cross-Plant Configurable Material: No, Material Configurable: No

Broad Support for Business Processes and Master Data Domains

Harness the power of ADS's expansive capabilities, designed to accommodate a wide range of business processes and master data domains. With ADS, seamlessly create, update, and manage master records while also implementing crucial functionalities such as block/unblock features and mass changes. Furthermore, our solution extends its comprehensive support to various master data domains - be it finance master, material master, business partners (including both customers and vendors), or enterprise asset management (EAM). Simplify and streamline your business operations with our versatile and supportive ADS platform.

- Material
- BP/ Vendor
- BP/ Customer
- Finance
- EAM

- Create, Change, Extend
- Mass Change
- Block/Unblock
- Mark for Deletion

Derivations:

ADS is firmly committed to maintaining top-tier data quality standards through its advanced derivation rules, designed to minimize errors and bolster data integrity. The true power of ADS lies in its ability to dynamically apply these rules based on specific attributes, ensuring precise and consistent data input. The defined attributes extend to new organizational levels such as Plants, Storage Locations, Sales Organizations, Company Code and Purchase Org among others, allowing for comprehensive and granular data management. This flexibility in configuration reflects your organization's specific needs, thereby eliminating manual data entry errors. By supporting accurate and reliable data, ADS empowers your organization to make confident, data-driven decisions with a heightened level of granularity and precision.

The screenshot displays the SAP S/4HANA Change Management interface for material \$1079. The main window is divided into several tabs: General, Notes, Attachments, Process Data, Change Management, and Basic Data. The 'Basic Data' tab is active, showing fields for Material, Material Type, Industry Sector, and Material Group. A red box highlights the 'Material Type' field, which is set to '2000'. Three blue arrows point from this field to three separate pop-up windows that show the derivation rules for this material type. The top window shows the 'Plant Data' tab, the middle window shows the 'Plant General Data' tab, and the bottom window shows the 'Plant Material Requirements Planning' tab. Each window contains a table of data with columns for 'Plant', 'Material Type', and 'Material Group'. The 'Plant Data' window shows data for plants 1000, 1001, 1002, 1003, 1004, 1005, 1006, 1007, 1008, 1009, 1010, 1011, 1012, 1013, 1014, 1015, 1016, 1017, 1018, 1019, 1020. The 'Plant General Data' window shows data for plants 1000, 1001, 1002, 1003, 1004, 1005, 1006, 1007, 1008, 1009, 1010, 1011, 1012, 1013, 1014, 1015, 1016, 1017, 1018, 1019, 1020. The 'Plant Material Requirements Planning' window shows data for plants 1000, 1001, 1002, 1003, 1004, 1005, 1006, 1007, 1008, 1009, 1010, 1011, 1012, 1013, 1014, 1015, 1016, 1017, 1018, 1019, 1020.

Description Builder:

Unveiling the power of A-D-S's Material Description Builder - a dynamic feature designed to revolutionize the way your organization builds and manages material descriptions. By smartly concatenating classification data, including classes and characteristics, this functionality allows for the derivation of highly accurate and detailed material descriptions.

This cutting-edge tool not only reduces manual intervention and potential errors but also ensures consistent terminology and structure across all descriptions, enhancing the overall data integrity. The result? More robust, consistent, and comprehensive material descriptions that are reflective of the specific traits and characteristics of your inventory.

With the Material Description Builder from A-D-S, you can elevate your data management strategies, ensuring detailed, reliable, and efficient descriptions that perfectly fit your organizational needs.

The screenshot displays the A-D-S Material Description Builder interface, showing the process of building a material description. The interface is divided into several sections:

- Descriptions:** A table with columns for Language Key, Language, and Material Description. The current entry shows "EN" for Language Key, "English" for Language, and "ADS Demo Class:FIRST VALUE,THIRD VALUE" for Material Description. Red arrows point from the "1st" and "3rd" labels in the Class and Characteristics sections to the corresponding parts of the material description.
- Class Assignment:** A table with columns for Class Type, Class Type Description, Class, and Class Description. The current entry shows "Material Class" for Class Type, "Material Class" for Class Type Description, "LAPTOP" for Class, and "Lenovo laptops" for Class Description. A red box highlights "ADS Demo Class" in the Class Description column, with a red arrow pointing to the "1st" label in the Characteristics section.
- Characteristics:** A table with columns for Characteristic Name, Characteristic Description, Characteristic Value, and Value Description. The current entry shows "Z_ADS_DESC_01" for Characteristic Name, "ADS Demo Characteristic 1" for Characteristic Description, "FIRST VALUE" for Characteristic Value, and "First Value" for Value Description. A red box highlights "FIRST VALUE" in the Characteristic Value column, with a red arrow pointing to the "2nd" label in the Characteristics section.
- Characteristics:** A table with columns for Characteristic Name, Characteristic Description, Characteristic Value, and Value Description. The current entry shows "Z_ADS_DESC_03" for Characteristic Name, "ADS Free Text Description" for Characteristic Description, "THIRD VALUE" for Characteristic Value, and "THIRD VALUE" for Value Description. A red box highlights "THIRD VALUE" in the Characteristic Value column, with a red arrow pointing to the "3rd" label in the Characteristics section.

Email Notifications

"Introducing A-D-S's 'Email Templates' feature – a powerful tool that enhances your organization's communication effectiveness by seamlessly integrating with your business processes. Our system comes pre-configured with a comprehensive selection of notification and activation emails, each thoughtfully designed to provide relevant information to the right stakeholders at the right time.

No more manual crafting of emails for every process or workflow stage. With 'Email Templates', you can effortlessly assign specific templates to correspond with each business process, promoting streamlined communication and enhanced operational efficiency.

These pre-configured email templates not only save time but also maintain consistency in your communication, ensuring that all pertinent information is delivered accurately and promptly. With ADS's 'Email Templates' feature, your business processes are backed by efficient and reliable communication, driving productivity and success."

Reminders for the
pending workflows**

Cost and Time Savings

ADS removes typical challenges associated with traditional implementation processes, leading to significant time and cost savings. This led ADS to faster time-to-value and more efficient resource allocation, maximizing return on investment.

In conclusion, ZitaTech's Accelerated Deployment Solution (ADS) is a state-of-the-art technology that offers a comprehensive, efficient, and customizable platform for managing S-A-P Master Data Governance. With its streamlined implementation, enhanced data quality, dynamic flexibility, and extensive support for business processes and master data domains, ADS is an invaluable asset for any business aiming to optimize their data management practices and gain a competitive edge in the market.

Zita Tech Inc, an SAP Certified partner

Our SAP portfolio is all-encompassing, providing strategic consultation, precise implementation, and fostering an efficient data governance strategy with a wide array of SAP tools. Our unique Accelerated Deployment Solution (ADS) swiftly facilitates SAP MDG implementations, ensuring clients experience quality master data management without sacrificing time or resources.

"ZitaTech Inc is a nimble entity, with an expertise that stretches across SAP functionalities, particularly excelling in the realm of Master Data Management. Our proficiency covers MDG, MDC, MDQ, data migration, and other essential SAP master data functions. We strive to provide enhanced governance and superior control over your data landscape, delivering quality solutions and streamlining SAP MDG implementations."

Our lean structure is our strength, enabling us to channel all our resources and expertise where they're most needed.

At ZitaTech, our approach is rooted in collaboration and innovation. We delve deep into your business's unique needs and challenges, enabling us to provide tailor-made solutions that fit like a glove.

Our ADS not only accelerates master data governance adoption but optimizes your existing applications, ensuring your data serves your business in a meaningful, secure, and consistent manner.

Despite our lean structure, our impact is far-reaching and significant. Our industry-specific, pre-configured rapid deployment solutions and our highly certified team position us as a leading figure in the SAP Master Data landscape. We believe our focused approach ensures higher returns on your SAP investments.

As a lean yet globally-present organization, we've carved our niche as specialists in Master Data Management. Learn more about our offerings and services at [\[ZitaTech's website\]](#). We're more than a tech company; we're your dedicated partner in Master Data Management."
